5.	G.vidhya	951321205045	g.vidhya72004

Flood Monitoring

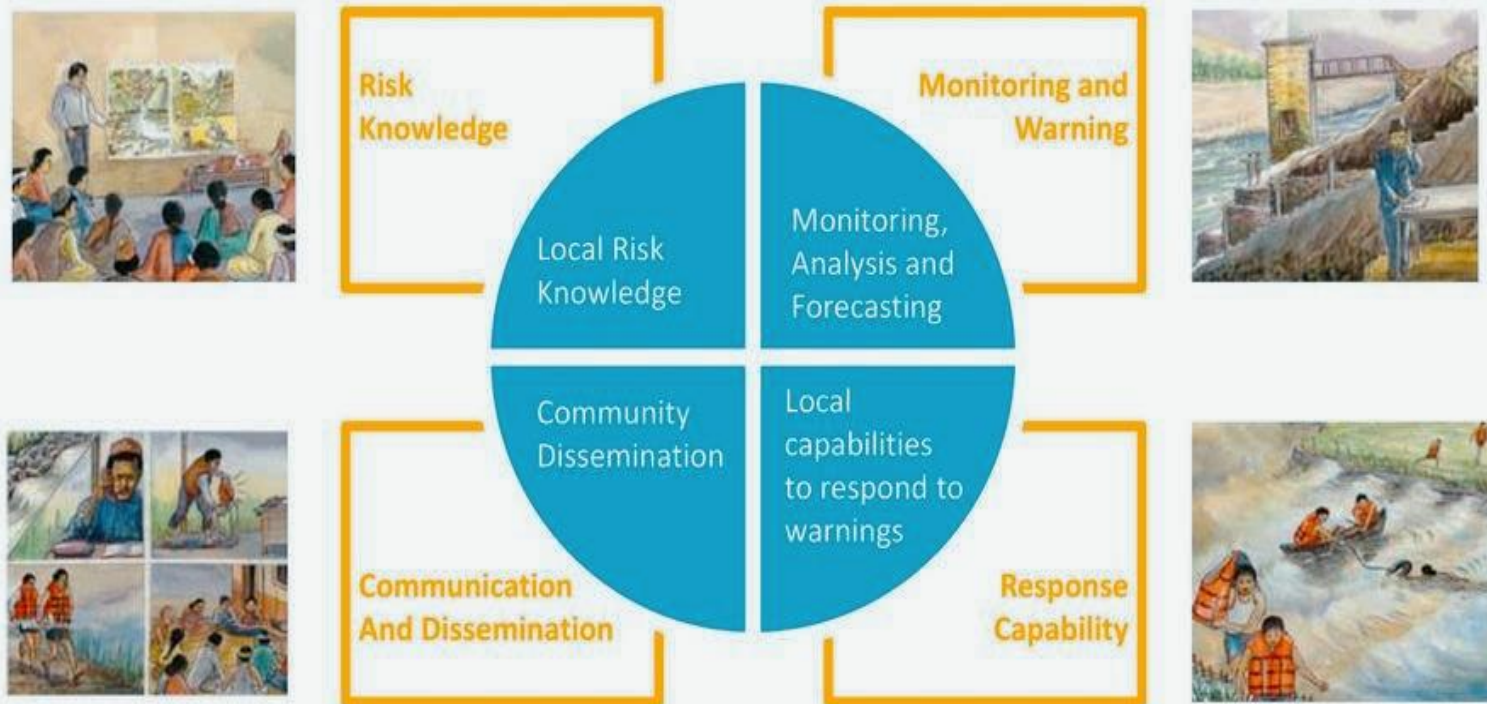

- ❖ Flood Monitoring System is used to monitor rise in water levels.
 - ❖ The System comprises sensors that are deployed in cities or areas.
 - ❖ The sensors can be connected to either main electricity or can be solar powered.
-
- ❖ Rains
 - ❖ Dam breaking
 - ❖ Rivers overflows
 - ❖ Snowmelts
- 

Flood Preventions Tips

- ❖ If your home is in a flood prone area raise your electrical Sockets higher up the wall to prevent damage from low level flooding
- ❖ Install water sensors or flood detection systems
- ❖ Regularly test your sump pump and consider a battery backup
- ❖ Regularly check and clean downspouts and gutters
- ❖ Improve grading and drainage around your home
- ❖ Install flood skirts and barriers
- ❖ Plants more trees
- ❖ Keep sandbags nearby.

EARLY WARNING SYSTEM COMPONENTS

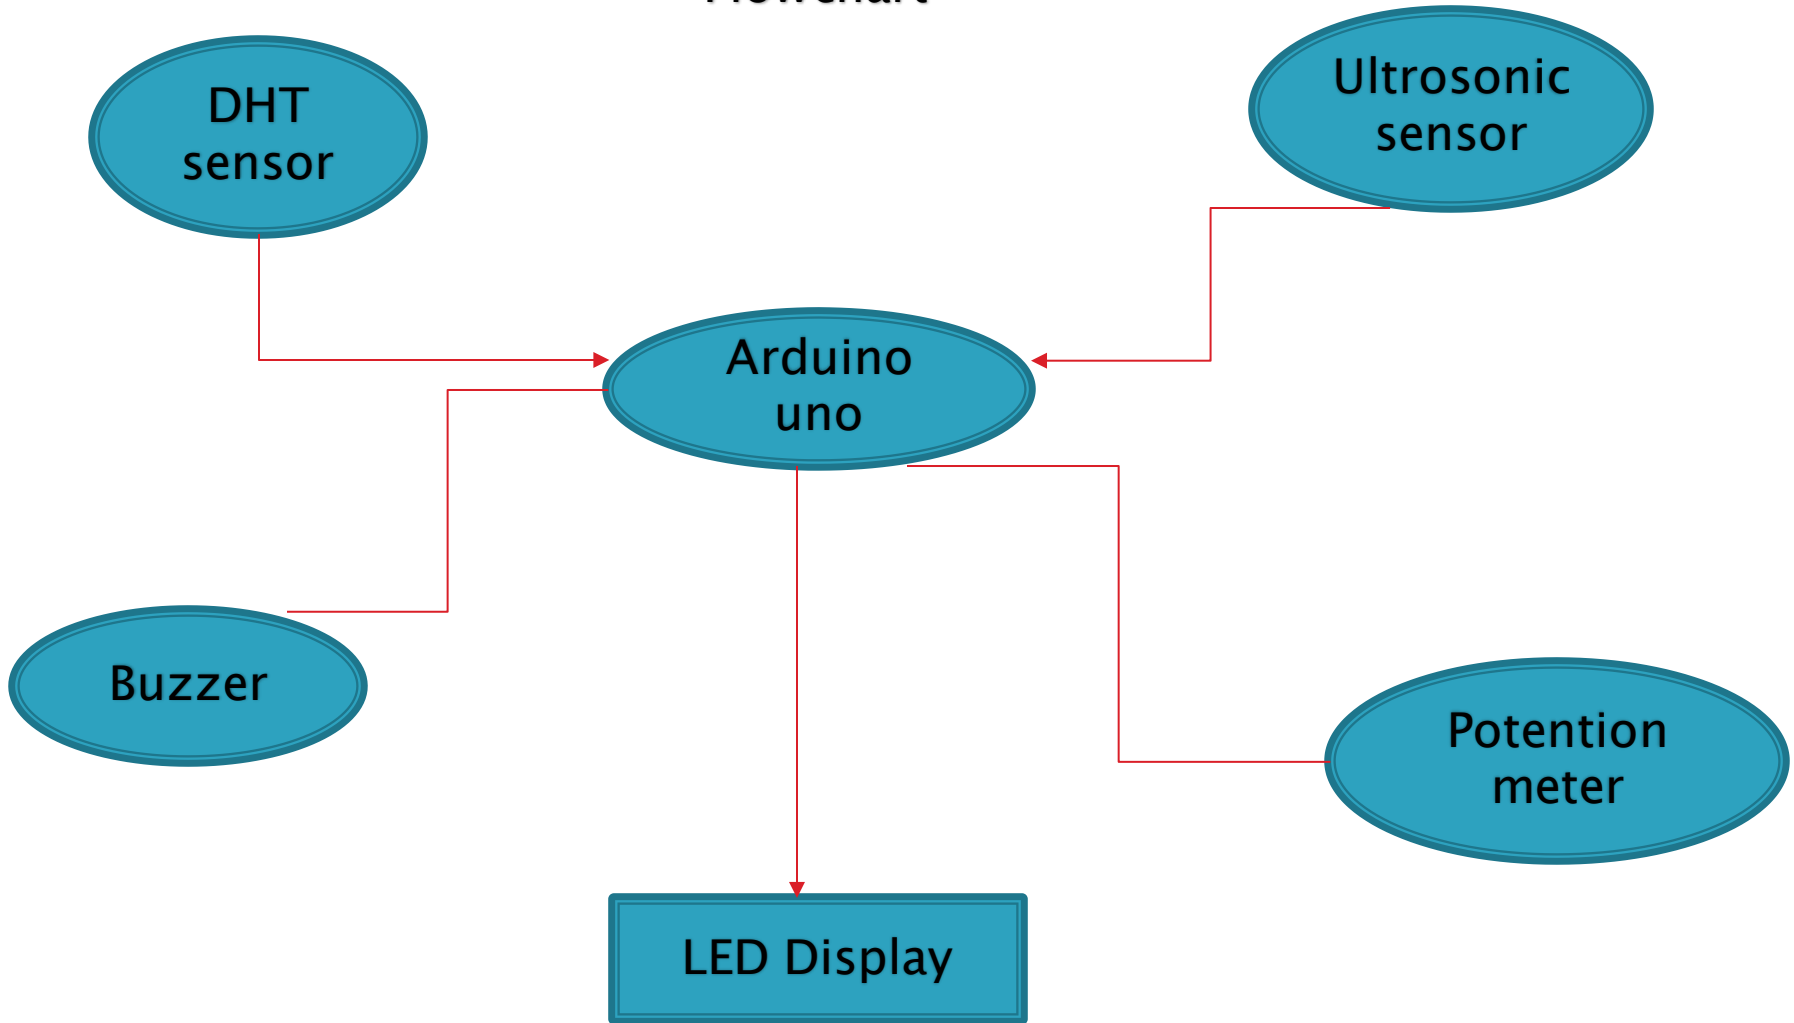

Flood Monitoring and warning System

Components

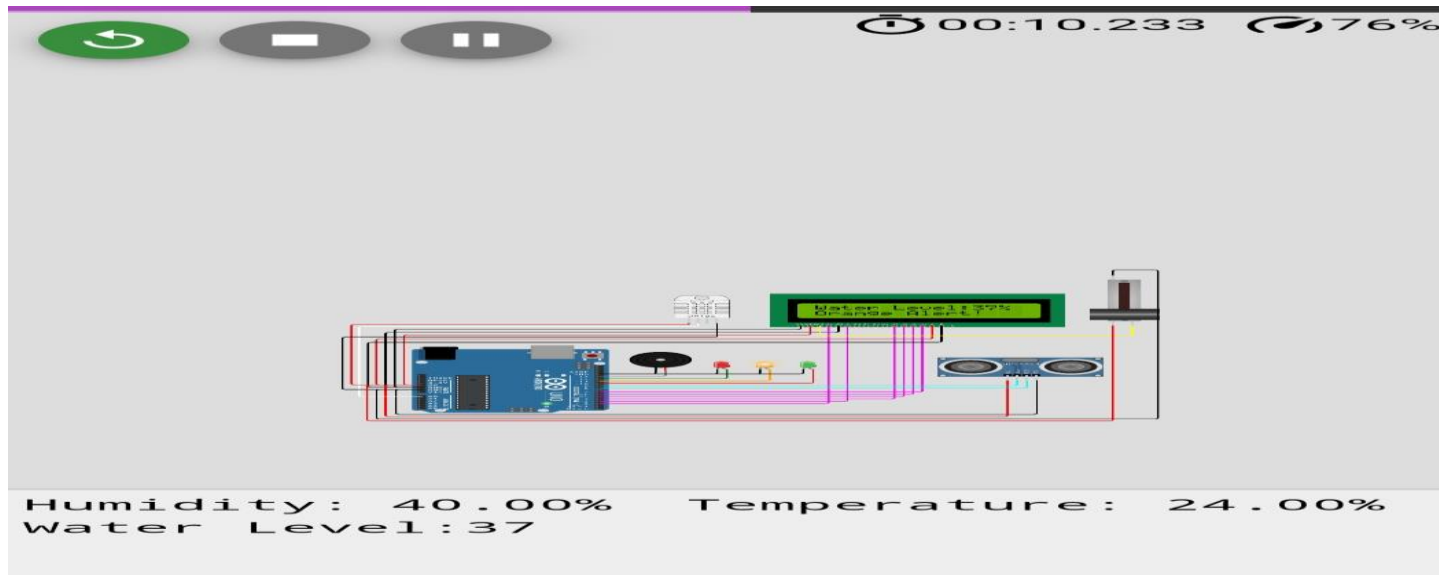

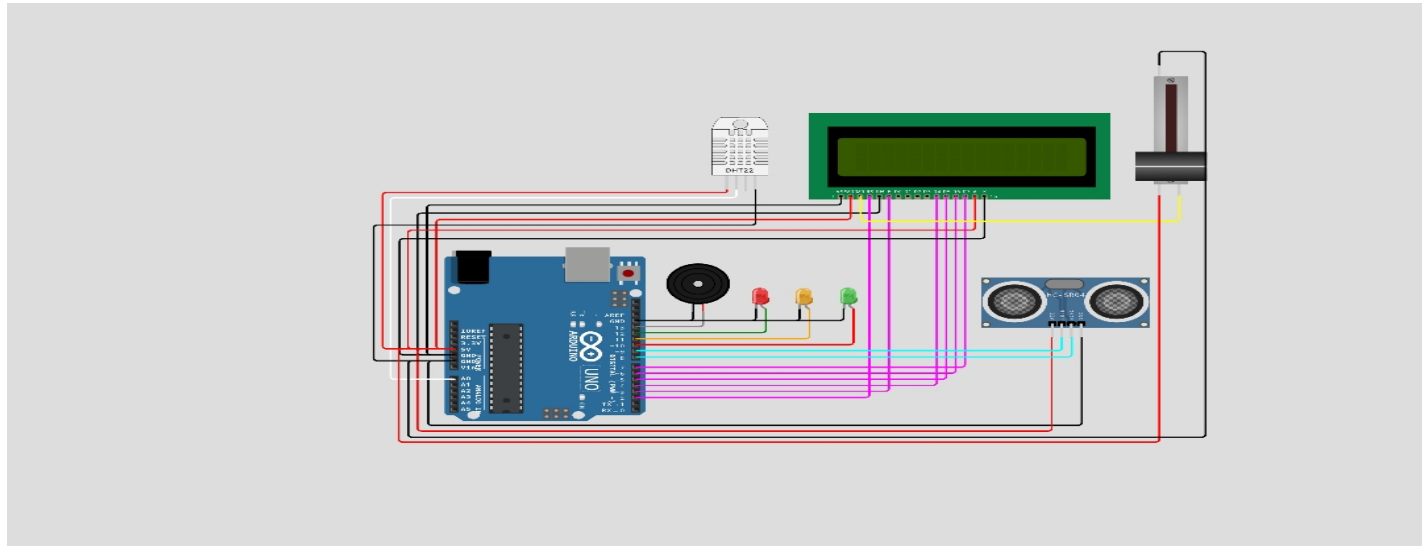

- ❖ LED display
- ❖ Ultrasonic sensor
- ❖ Arduino uno
- ❖ DHT sensor
- ❖ LED light
- ❖ Buzzer
